

Create a Multi-Stage Mars Visit Application Form

Description: Build a simple multi-stage application form for individuals interested in visiting Mars. The form will collect various details and preferences from applicants. This project should take approximately 8-10 hours to complete, and you will have 3 days to submit your work.

Requirements:

Form Stages:

- Create a multi-stage application form with the following stages:
 - Stage 1: Personal Information
 - Stage 2: Travel Preferences
 - Stage 3: Health and Safety

Form Fields:

- Each stage should contain relevant data fields. Here are examples of the fields for each stage:
- Stage 1 - Personal Information:
 - Full Name
 - Date of Birth
 - Nationality
 - Contact Information (Email, Phone)
- Stage 2 - Travel Preferences:
 - Departure Date
 - Return Date
 - Accommodation Preference (Space Hotel, Martian Base)
 - Special Requests or Preferences
- Stage 3 - Health and Safety:
 - Health Declaration (Yes/No)
 - Emergency Contact Information
 - Any Medical Conditions (if applicable)

Form Navigation:

- Implement navigation buttons to move between form stages. Users should be able to go back and forth to review and edit their entries.

Form Validation:

- Implement data validation for the form fields to ensure data accuracy and completeness. Validate the following:
 - Required fields (all stages).

- Valid email and phone formats.
- Date formats.
- Health declaration (if applicable).

Form Submission:

- Implement a submit button to finalize the application.
- Display a success message upon successful submission.

Styling:

- Create a visually appealing and responsive design for the application form. Consider using CSS or optional UI libraries for styling.

Testing (Bonus - Optional):

- Write unit tests for the form validation logic using Jest.

Code Organization (Bonus - Optional):

- Organize your code using best practices.
- Maintain clean and well-documented code.

Form Library (Bonus - Optional):

- Feel free to use any form library you find suitable for building the form.

Next.js (Bonus - Optional):

- If you are comfortable with Next.js, consider using it for this project to enhance performance.

Provide Live Link:

- Deploy the completed project to any hosting platform of your choice and provide a live link for testing and evaluation.

Submission:

You are required to submit your project on a GitHub repository and provide a live link for viewing the site. Include a README with clear instructions on how to set up and run the project.
